Taking structural plate to a new dimension.

With the introduction of Ultra-Cor®, AIL is taking engineered structural plate to new dimensions in capability and performance. As the world's deepest corrugation profile, Ultra-Cor® combines all the advantages of lightweight construction with previously-unheard-of strength and durability to create the largest corrugated metal structures in the world today. With an impressive 500 mm (20") pitch and 237 mm (9.5") depth, its ultra-large corrugations allow it to reach greater spans and withstand the heaviest of loads. And, just like all AIL engineered solutions, Ultra-Cor® ships and installs easily with minimal equipment and labour requirements.
